U.S. Patent Appln. No. 09/978,345 Proposed Claims

Docket No. 9500-1

Proposed An endments to Claims

- 1.(Currently Amended) A method for non-invasively measuring arterial blood pressure at a human wrist of a patient, said method comprising the steps of:
 - a) keeping a wrist of a patient at a posture which can lower a position of at least one tendon of the wrist near to a radial artery to be measured, and cause the radial artery to be close to a radius of the wrist,
 - b) applying a changing external pressure to the skin above a point where the radial artery crosses a most protuberant spot on a volar aspect of the radius of the wrist;
- c) detecting a pulse wave signal of the radial artery along with a change in said external pressure on the skin above said point;
- d) measuring blood pressure of the radial artery by measuring said external pressure applied to the radial artery when said pulse wave signal changes.
- 17.(Currently Amended) A non-invasive apparatus for measuring arterial blood pressure at a human wrist comprising:
- a) a wrist holding device for keeping a patient's wrist at a posture which can lower a position of at least one tendon of the wrist near to a radial artery to be measured, and cause the radial artery to be close to a radius of the wrist,
- b) a pressure bladder for applying an external pressure to the radial artery, and a pressure bladder holding device for stably positioning said pressure bladder on the skin above a point where the radial artery crosses a most protuberant spot on a volar aspect of the radius of the wrist;
- c) a pulse transducer <u>located on the skin above said point</u> for detecting a pulse wave signal of the radial artery; and
- d) a pressure feeding-measuring system connected to said pressure bladder and said pulse transducer; said pressure feeding-measuring system including a pressure feeding device for feeding pressure to said pressure bladder, and a signal processing device for processing the detected pulse wave signal of the radial artery and controlling said pressure feeding device, so as to neasure blood pressure of the radial artery by measuring said external
